Good morning. Thanks Ayn - this is extremely helpful and makes sense.

I propose some variations on our approach today to make best use of people's time. The points of confusion seem to stem around:

- 1) well construction/sampling
- 2) data results.

while both are critical, some solid effort needs to be placed on #1 as we've discussed. #2 is coming along and we have a good opportunity to inform USGS on that matter.

Let's instead have two subgroup meetings today - one focused on #1, and one on #2. for #1, let's gather yourself, me, Alice, Gary, and Dave and anyone else that we need for that. for # 2, Linda, Alice, myself, Dave, yourself if you'd like, and anyone else we need for that. then we can come back together at the end of the day for a wrap up.

Tomorrow I expect we'll need to brief people like Jim, Ramona, and Bob S in advance of the meeting with USGS.

we'll re-arrange the lotus notes invites.

thanks all!

jose

The USGS Office of Water Quality Chief has the following suggestion for how to spend the 30 min that the 2 agencies have together on Friday. Given the brevity of time for this conversation, this may make sense as an approach, with us sharing the powerpoint presentation in advance but not taking the limited time to go through it. I think Donna is right that we will not have time for long technical presentations in this initial meeting. Let's discuss tomorrow, and I am asking for Jim's feedback on what approach he'd like to see.

Ayn and Dave, I am providing some suggestions as requested by Ayn previously.

Goals: Clear the confusion about differences or apparent differences with USGS and EPA. Identify and answer relevant questions. Determine approach to communications with interested parties.

Objectives:

- 1) Identify the questions that others have raised to USGS and to EPA that result in "confusion" about the published results of the April/May 2012 activities. This would be an exercise to scope and bin the questions
- 2) Independently develop scientific and or technical responses to the questions as appropriate and applicable to each agency. Point out information gaps or knowledge gaps that might prevent complete answers
- 3) Collectively determine and have a dialog on differences in opinion, if any, among USGS and EPA
- 4) Propose a mechanism to address differences in opinion and relative importance of those differences (trivial or important). This is so "we" know if there are differences and how to deal with them in terms of actions we might take in the future. Example, get more information if needed to better inform answers.
- 5) Determine how to structure the eventual meeting with interested parties

This is simply a straw man. I am open to suggestions and alternative approaches. We probably will not have time for long technical presentations in the 30 minutes we are given for this first meeting.

I have asked Francesca Wilde from the Office of Water Quality to work with me to answer the questions that come from this first meeting.

Donna, as you'll see, Jim Martin has asked that Dave and I work with you as we develop a presentation as outlined below. Perhaps there is also direction within USGS to work on something along these lines as well?

Ayn - I suggest you try to engage Ada, if you can. It would be good to have a joint product, if that is possible.

Very good idea to work with Donna on this.

Let's catch up around noon, perhaps? It would be great if we could get Bob P something before COB.

Jim

So,

WH has asked that DOI and EPA give a technical briefing to industry on the EPA/USGS results and conveyed this to David Hays and me. The objective would be to clear the "confusion" about differences etc.

David Hayes and I will ask each team to put their summary together and then request a joint briefing. We will then set a industry joint briefing with EPA and USGS jointly presenting.

I am attaching what USGS sent to me after David and I spoke. Do we have one I can share with David?

Thanoughts
